

This is GEM's first high volume deluge blancher. At sixty-nine feet overall length, it was considered enormous when it was manufactured in 1982. Today, transporting a new GEM French fry potato blancher requires more than one large truck.

This is a GEM 8' wide batter applicator. It is capable of applying batter to over 40,000 pounds of french fry potatoes per hour.

### Do You Need Assistance in order to Expand Your Processing Capacity?

GEM has manufactured more 8' wide French fry potato fryers than any other company in the world. 10 and 11' wide GEM fryers are also in operation.

If the large size equipment you need to expand your capacity is not currently available, contact GEM Equipment. We will help define your requirements, then evaluate what has to be done to meet your objective. If GEM is qualified to address your specific needs, help with budgeting and preliminary engineering is available.

This vibrating conveyor design was originally developed for sawmill duty. Manufactured for a seed processor, this conveyor is 3' wide and over 60' long. Conveying speed is approximately 80' per minute. Capacity of 125 tons per hour is routine.

*In business since 1969*
